

Uncovering or Identifying Potential Risks in your Labeling and Artwork Process

ACTIONABLE SOLUTIONS TO COMMON CHALLENGES IN YOUR LABELING PROCESSES

Regulatory Non-Compliance

Problem: Missed regulatory updates or incorrect label content can lead to costly recalls and penalties.

Solution: Implement automated tools to track regulatory changes and ensure labeling accuracy before going to print.

Human Error

Problem: Manual proofreading increases the chance of errors, risking undetected deviations.

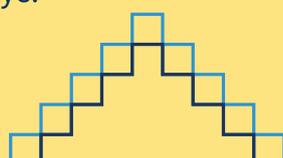

Solution: Use automated comparison tools to detect even the smallest changes in labeling content.

Artwork Integrity

Problem: Poor artwork quality or miscommunication between teams can result in misprints or incorrect packaging.

Solution: Ensure artwork consistency by using advanced verification tools to catch deviations that can be hidden in artwork layers and undetectable by the human eye.

Version Control Issues

Problem: Managing multiple versions of a label or artwork without clear oversight can lead to outdated or incorrect versions being used.

Solution: Implement version control systems to track changes, ensuring the most accurate and up-to-date artwork is used.

Take control of your labeling and artwork processes today. **Implement TVT** to reduce risks and streamline compliance.
